Technical and Professional Skills

- Programming: Python, JavaScript, SQL
- Backend & APIs: FastAPI, Node.js, Express.js, REST APIs
- Frontend & Mobile: React, Next.js, Flutter, HTML5, CSS3
- Databases & Data: PostgreSQL, DBeaver, SQL, Data Analysis
- Testing: Cypress, Playwright, End-to-End Testing
- Systems & Product: Requirements Analysis, Business Process Analysis, PRDs, User Stories, Epics, Product Metrics, RICE, MoSCoW
- Tools: Git, Jira, Figma, Lucidchart, Vercel, Render

Leadership and Volunteer Experience

Group Project Lead | AkiraChix
May 2026 - August 2026
• Led specific workstreams, including backend development and QA testing, during sprint-based group projects at AkiraChix, such as Pamodzi

Education

AkiraChix
Diploma in Information Technology
February 2026- Present

Professional Summary

Glory is a software developer who enjoys solving problems, working with others, and learning through building digital experiences that work reliably for the people who use them. With hands-on experience across web, backend, and mobile development, product design, data and machine learning, IoT, and quality assurance, she brings a practical, end-to-end approach to building technology.She is looking for software development opportunities where she can help deliver dependable, user-focused products.

Experience

Pamodzi

A multi-part group project built by an AkiraChix cohort team (Phoenix) to connect commercial buyers with agricultural cooperatives.

- Conducted field and desk research in Zambia to understand user needs and challenges related to connecting commercial buyers with agricultural cooperatives.
- Led weekly sprints and conducted retrospectives to review team progress, identify improvements, and help the group achieve its goals for each week.
- Designed the mobile application screens for the demand campaign, translating user needs into interface designs and user flows.
- Created a system architecture diagram illustrating the main components of the Pamodzi platform and how they interact.
- Contributed to the development of the Pamodzi informational website to communicate the platform's purpose and features.
- Developed demand campaign endpoints using FastAPI to support the management and coordination of produce demand from commercial buyers.
- Implemented role-based access control (RBAC) to restrict system access according to assigned user roles.
- Developed the demand campaign mobile screens using Flutter and Dart and integrated them with the backend endpoints.
- Wrote and executed API test cases using Postman to verify backend endpoint functionality and successful responses.
- Wrote and executed Cypress test cases for the informational website to validate page navigation, call-to-action functionality, and content.

Airbnb Collaborative Trip Planning

A product management case study exploring ways to improve group accommodation planning by helping travelers compare properties, align preferences, and reach decisions together.

- Conducted secondary research into Airbnb's existing group planning features to identify potential friction points in collaborative accommodation decisions
- Defined target users, user needs, problem statement, and product opportunity to guide the proposed product improvements
- Developed a Product Requirements Document (PRD) outlining product strategy, MVP scope, feature prioritization, and user stories
- Designed a proposed user flow to help groups organize accommodation requirements, compare shortlisted properties, and align preferences
- Established proposed success metrics and product hypotheses to evaluate potential improvements in decision-making efficiency and coordination
